

Level 1

Challenge D

Directions:

In the `Haskell_Challenges.hs` file, create a function called `"prod"` that does the following:

The function will take in an `int` and an infinite list of `ints`. The function should return the product of the first `n` values in the list. Assume the given value for `n` will always be greater than zero.

You will have to figure out an appropriate data type for this function and then define it in the challenges file.

Examples:

```
{- call -}  prod 5 [1 ..]
{- returns -}  120

{- note: the first 5 values would be 1,2,3,4,5 which when all multiplied
together gives 120 -}
```

```
{- call -}  prod 7 [2, 4 ..]
{- returns -}  645120
```

```
{- call -}  prod 1 [3 ..]
{- returns -}  3
```

```
{- call -}  prod 4 [-3, -1 ..]
{- returns -}  9
```
