

Level 2

Challenge D

Directions:

In the `Haskell_Challenges.hs` file, create a function called `"sumOfEvenDigits"` that does the following:

The function will take in a single `int`. It will return the sum of the even digits in the given number.

You will need to figure out an appropriate data type for this function.

Examples:

```
{- call -}    sumOfEvenDigits 123
```

```
{- returns -} 2
```

```
{- call -}    sumOfEvenDigits 1234567
```

```
{- returns -} 12
```

```
{- call -}    sumOfEvenDigits 123456789
```

```
{- returns -} 20
```

```
{- call -}    sumOfEvenDigits 644
```

```
{- returns -} 14
```

```
{- call -}    sumOfEvenDigits 775
```

```
{- returns -} 0
```

```
{- call -}    sumOfEvenDigits 0
```

```
{- returns -} 0
```
