

Level 1

Challenge A

Directions:

In the `Haskell_Challenges.hs` file, create a function called `"sign"` that does the following:

The function will take in a single `Int` parameter. If that parameter is negative, return `-1`. If that parameter is `0`, return `0`. If that parameter is positive, return `+1`.

The datatype of the function should look like this:

```
sign :: Int -> Int
```

Examples:

```
{- call -}    sign -50
```

```
{- returns -} -1
```

```
{- call -}    sign 0
```

```
{- returns -} 0
```

```
{- call -}    sign 150
```

```
{- returns -} 1
```
