

Level 1

Challenge D

Directions:

In the `prolog_challenges.pl` file, create a predicate called `"factorial"` that does the following:

The predicate will compute the factorial of a number. It should have arguments for the number to take the factorial of and the result.

Examples:

```
/* query */    ?- factorial(-5, Result).  
/* result */   false.
```

```
/* query */    ?- factorial(0, Result).  
/* result */   Result = 1 .
```

```
/* query */    ?- factorial(3, Result).  
/* result */   Result = 6 .
```

```
/* query */    ?- factorial(5, Result).  
/* result */   Result = 120 .
```

```
/* query */    ?- factorial(10, Result).  
/* result */   Result = 3628800 .
```
